Perlast Ltd gains OHSAS 18001 Health and Safety Certification

Elastomer Seal specialist has gained certification to OHSAS 18001, the globally-recognised specification for managing health and safety.

Perlast Ltd (part of Precision Polymer Engineering Ltd) is one of the few companies in its sector to have achieved quadruple certification – OHSAS 18001 for health and safety, plus ISO 9001 and AS 9100 (aerospace) for quality and ISO 14001 for its environmental management systems.

Managing Director Peter Cloney said: "Good Health and Safety practices are at the forefront of our activities. In achieving this Standard, we are demonstrating our commitment in this area to both staff and customers".

"OHSAS helps in a variety of respects -- it helps to minimise and control risk to employees, to continually improve health and safety management performance, it demonstrates diligence and provides assurance. The benefits for everyone in the business can be substantial."

The company was independently assessed for the occupational health and safety standard by Lloyd's Register Quality Assurance.
